Parameter	Master Channel Parameter	Slave Chanel Parameter
Channel No	1	1
Channel Type	0x30(Shared Master)	0x20(Shared Slave)
Device Number	0x1234	0 (Wild Card Search)
Device Type	0x7E	0x7E
Tx Type	0x02	0x02
Channel Frequency	25	25
Channel Period	8192(4Hz,250ms)	8192 (4Hz,250ms)
Primary Search Time	10 Sec	10 Sec
Secondary Search Time	10 Sec	10 Sec
Tx Power	+12dbm	+4dbm

We are set the Master and Slave Device channel parameter as per table

Issue 1: In power on condition Slave Device Search Master Channel for 20 Second and slave device connect to Master Device. But after sometimes slave device is disconnect from master then slave device again search master channel for 20 second but not found any master channel,

Issue 2: Slave device connect to master device in network at that time we have seen RSSI is -45 to -60 dbm and distance between master and slave is 2 to 5 feet. After some time slave channel is automatically closed. We are getting EVENT_CHANNEL_CLOSED event from stack.

Issue 3: Some time we are getting Channel close EVENT_CHANNEL_CLOSED after one to second when slave channel open.
