

From Sensors to Insights: How IoT is Transforming Fundamental Industries

Kyle Seaman, Sentenai

Digital Transformation

Digital Transformation

Analog → Digital → Data → Information → Transformation

Aaron Levie ✓

@levie

Following

Digital transformation is ultimately about getting closer to the value proposition any customer wants: solving a problem better than before, with greater convenience, at a lower price. Any digital strategy that doesn't advance this is just distraction.

Digitization

Internet of Things

Impact on Digitization

- Adding new context across the enterprise
- Completing the loop from real-time data to taking action

Digitization

IoT infrastructure is generalized up to the point that data is interpreted

ERPs

Excel Files

Digitization

Uniqueness of Time Series Data

- Write once
- Non-Transactional
- Rarely Deleted
- Non-Relational

Digitization

Uniqueness of Time Series Data

- Uneven Intervals
- Different Event Sizes and Formats
- Unique Access Patterns

Digitization

Core Applications

Advanced Reporting

Anomaly Classification

Exploratory Analysis

Condition Based Maintenance

Continuous Optimization

Trends

- Adjusting to Aging Workforce Realities - Codifying Domain Knowledge
- Enabling Global Scale of Best Practices - Getting full context in near real-time and sharing broadly

Digitization

High Value Crops

Cannabis Digitization

Connected Operations

Gateway to read & write all PLCs via modbus

Automatic monitoring and remote access

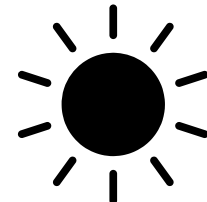

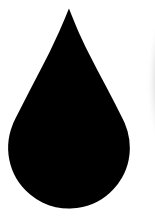

Cannabis Digitization

Expanded Sensing

 ANT Wireless Connectivity

 Solar powered lithium batter

Digitization
Oil & Gas

Characteristics

- Not a lot of actual failures
- Time drift across systems
- Proprietary production data
- Few equipment variants
- Decades of Operational Data

Digitization

Data Mining

Build Equipment Profiles from Historic Data
Modeling SME Behavior
Actuarial Data Modeling

Digitization

Traditional Ag

Traditional Farming

Characteristics

- Low Bandwidth and Cellular Requirements
- Cost Sensitive
- Highly Variable Across Locations
- Slow Reaction to Inputs & Adjustments

Traditional Farming

Opportunities

- Mesh Networking Devices
- Tractor Data Harvester
- Data Share Co-ops
- Using Predictions To Smooth Operations

Digitization

Finding ROI

Finding ROI

Business Model & Operations

- Bottom line via reduced service costs & Opex
- Top line with higher value add contracts

Finding ROI

Customer Experience

- Physical product analytics to indicate usage and failures
- Mass personalization for experience and support

Finding ROI

Product Innovation

- Analytics to drive and validate product decisions
- Continuous improvements and differentiation

Digitization

Finding ROI

Finding Data Multipliers

Future Proofing with Data
Collection Today

Not all data is created equal

Not all data is created equal

$ROI = (Failure - (Data\ Acquisition + Storage + Processing)) * Instances$

Digitization

Where things are going

Laying the ground work for ML/AI
driven applications

Increased sensing capabilities
with flexible deployments

Moving to recurring/subscription
business models

Thank you
